

## General Notes

- 125/125 Russian Navy, 25/25 Null, 125/125 US Navy
- US air force, army, and space force all share the same uniform, so the model will probably have a hard time distinguishing the difference. Nothing to do about it, just noting it for the report.
- Lots of overlap with the Russian marines and air force datasets

Too blurry to tell

Incorrect annotation

Chinese army?

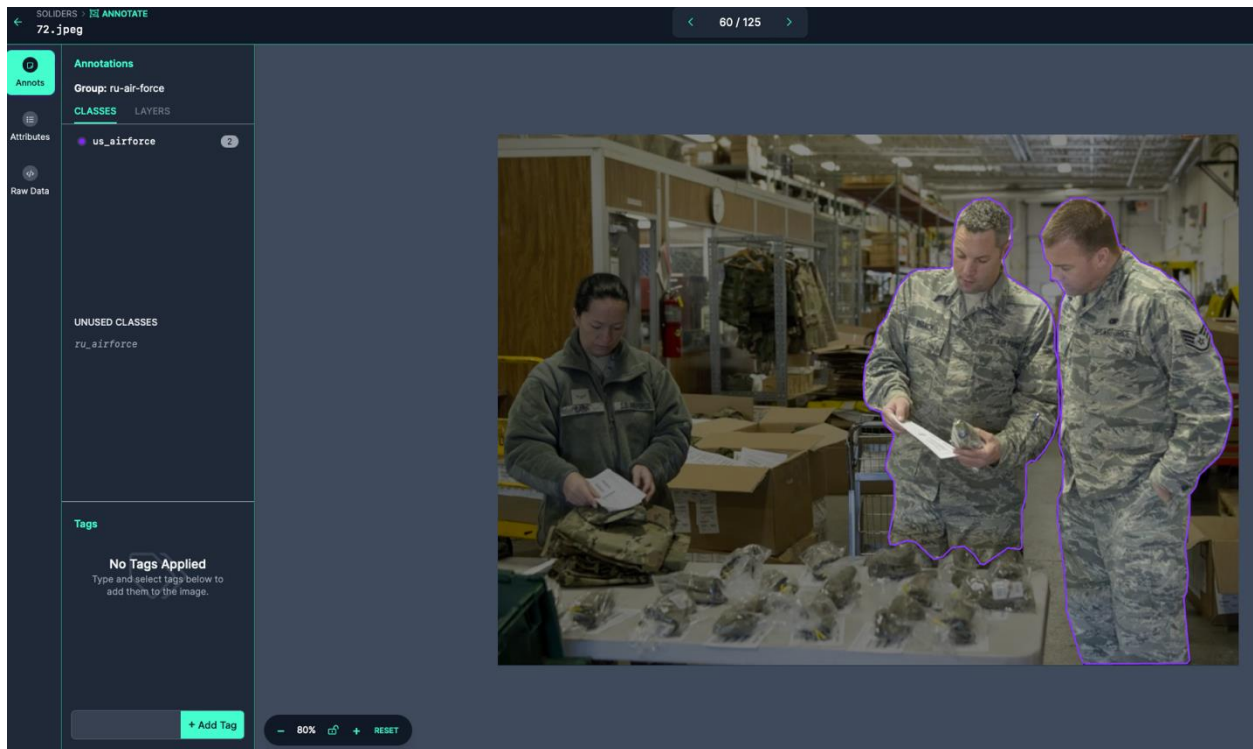

Soldier on the left is wearing the old airforce uniform but soldier on the right is not from a US faction.

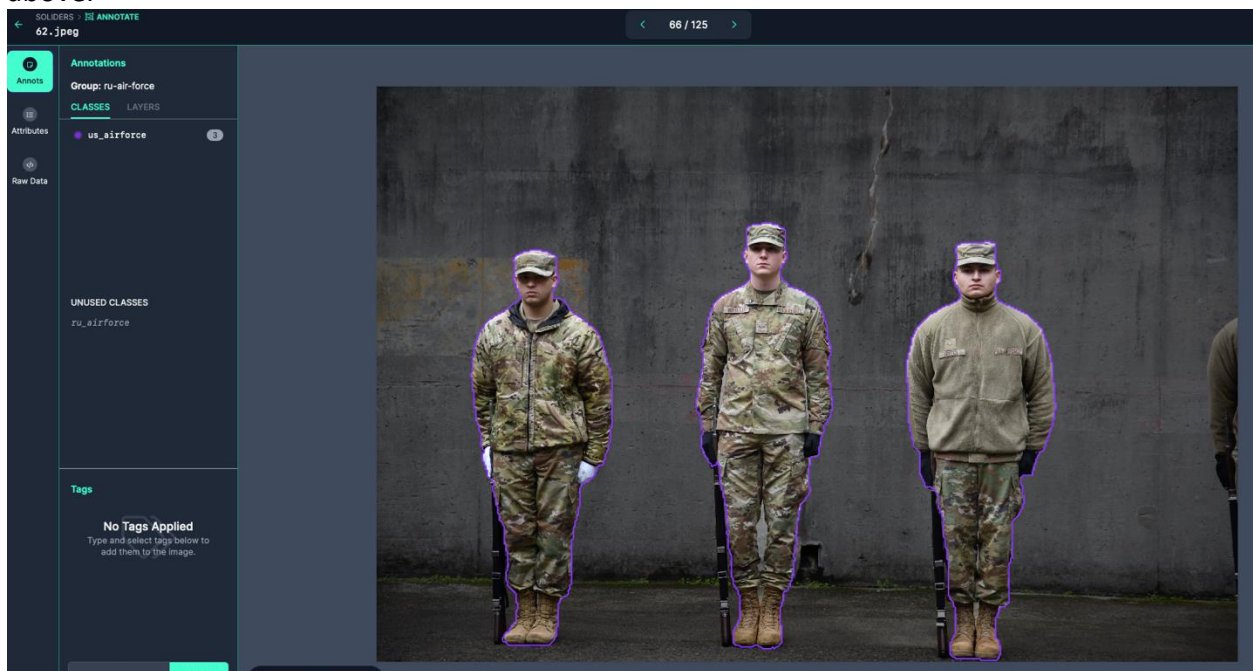

Technically the lady on the left is wearing an approved air force uniform (it's old but still)

This is an example of an already annotated one that you did with the same uniform as the lady above.

Soldier on the left is not from a US faction
