

General Notes

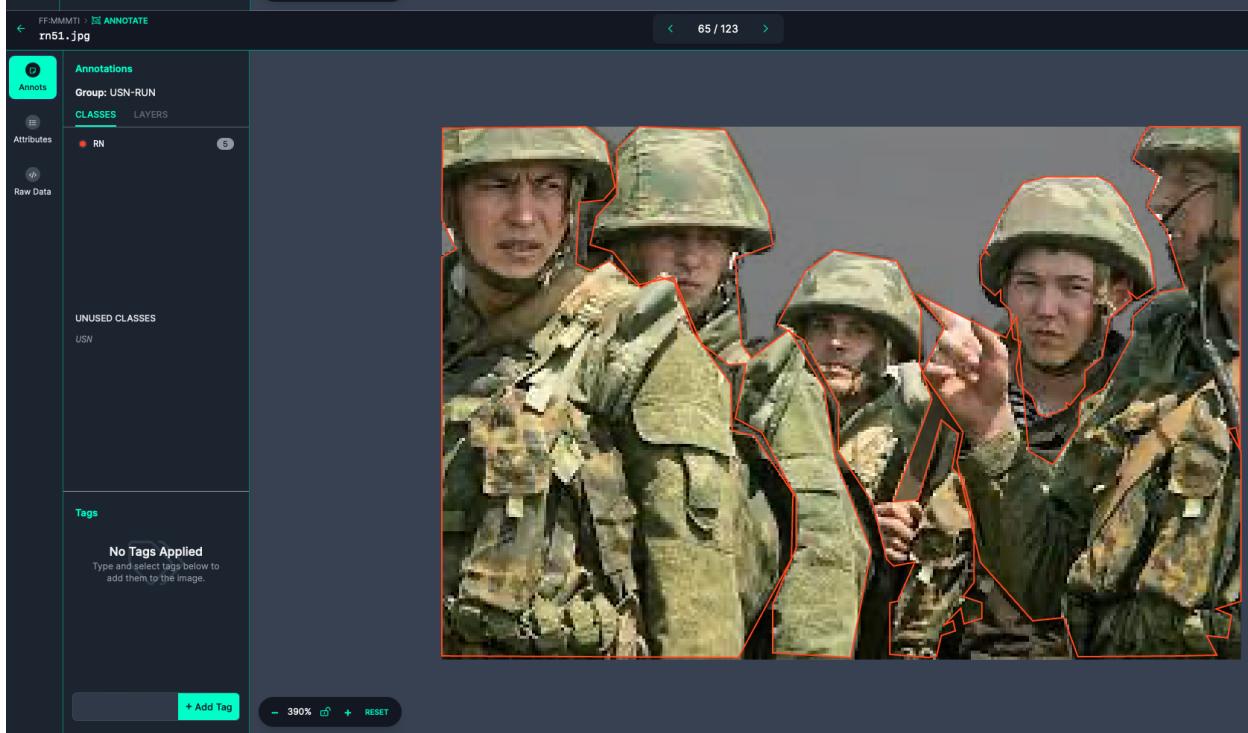

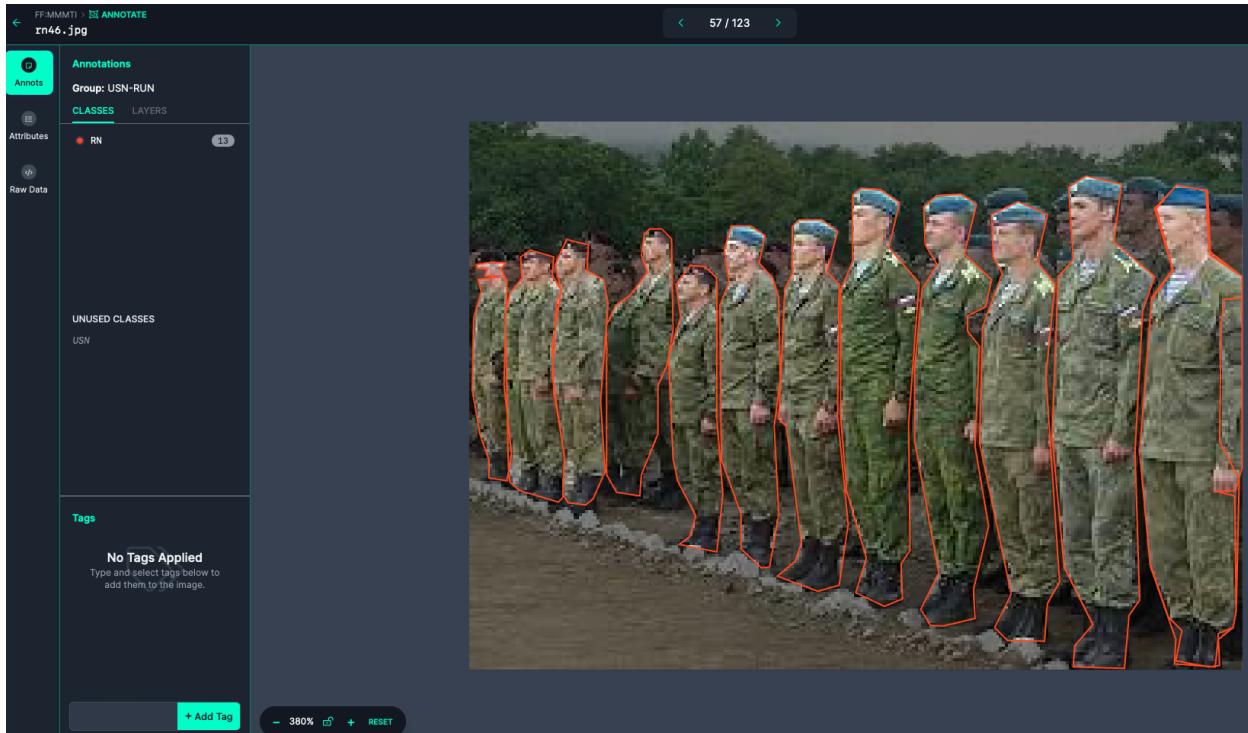

- 123/125 Russian Navy, 27/25 Null, 125/125 US Navy
- Class name needs to be changed to match the format we agreed to (i.e. RU_navy and US_navy)
- Several duplicates (maybe 5-7 images) found within the same class. Not a big deal, just noting it for the report
- Lots of overlap with the Russian marines and air force datasets

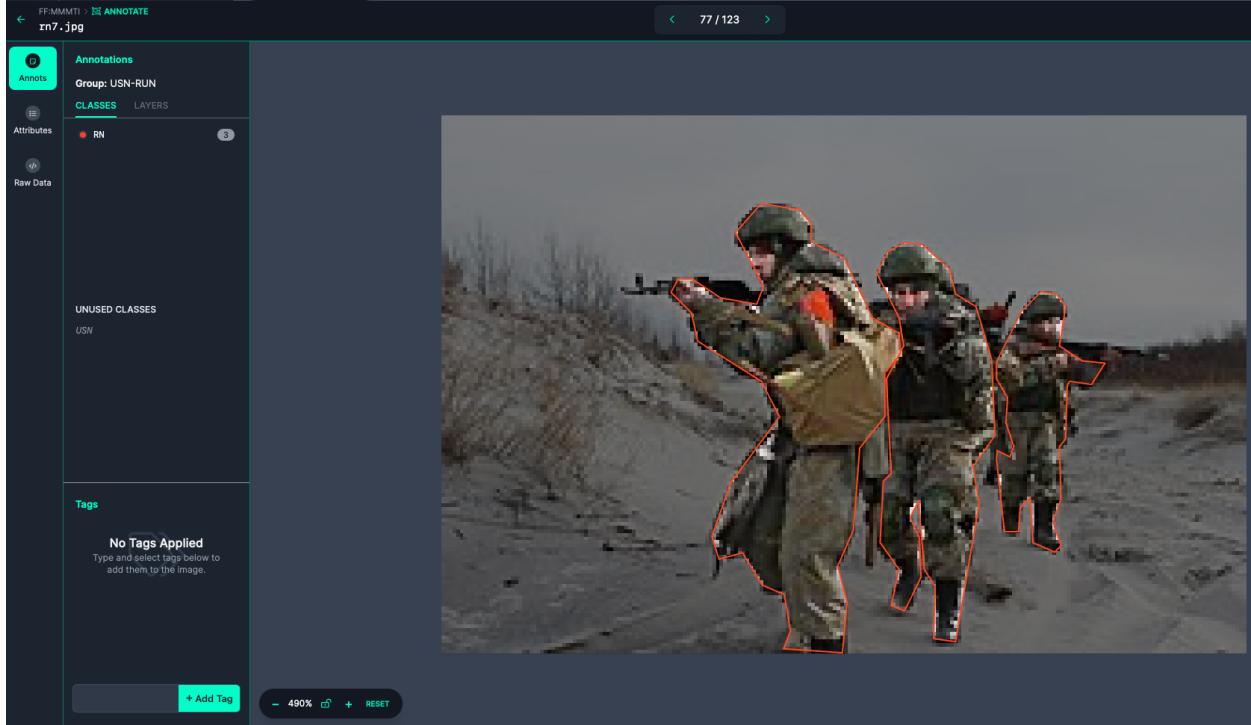

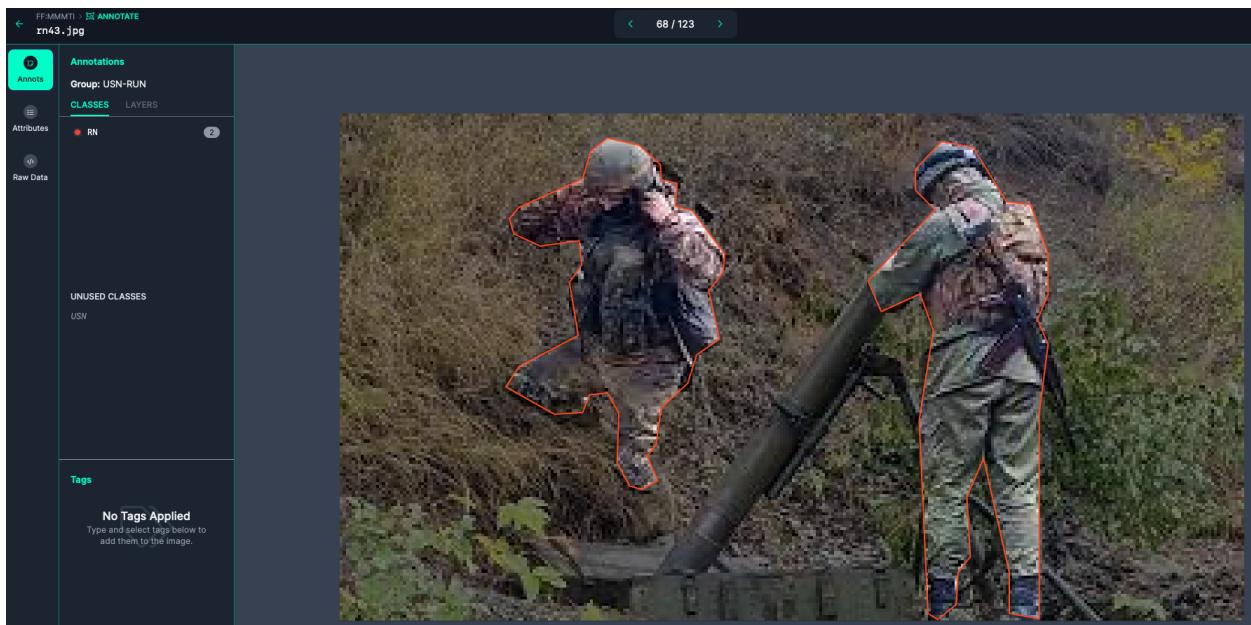

Too blurry/pixelated to tell

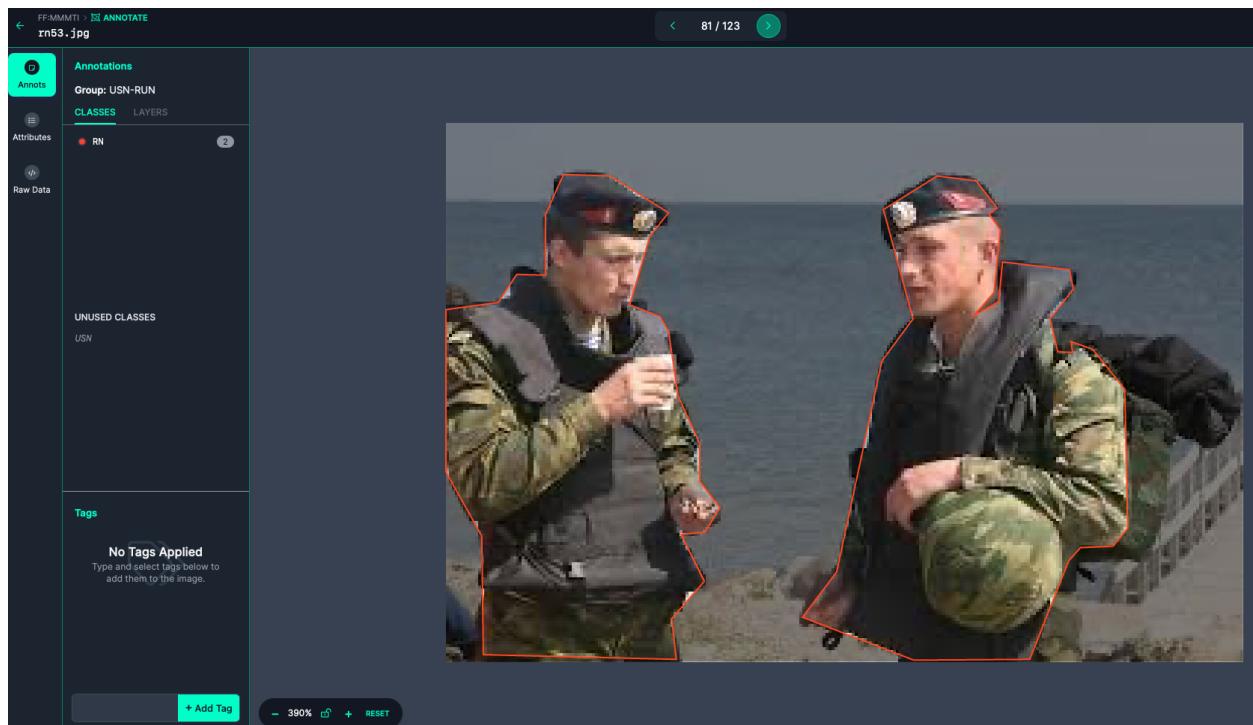

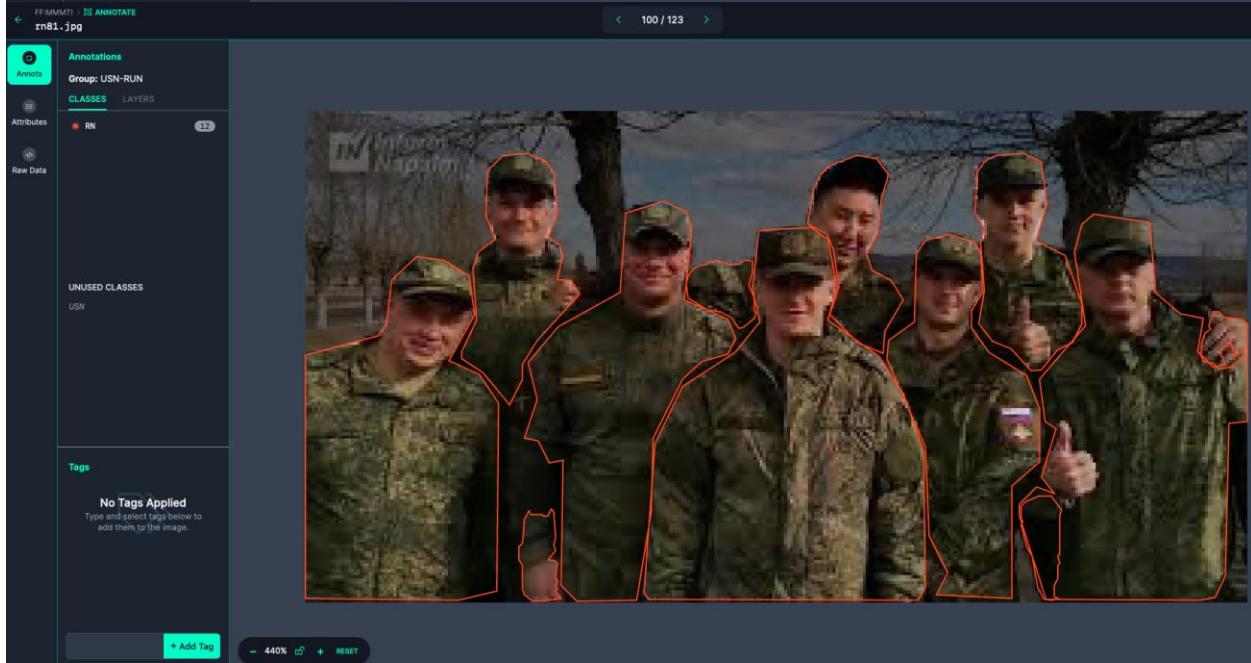

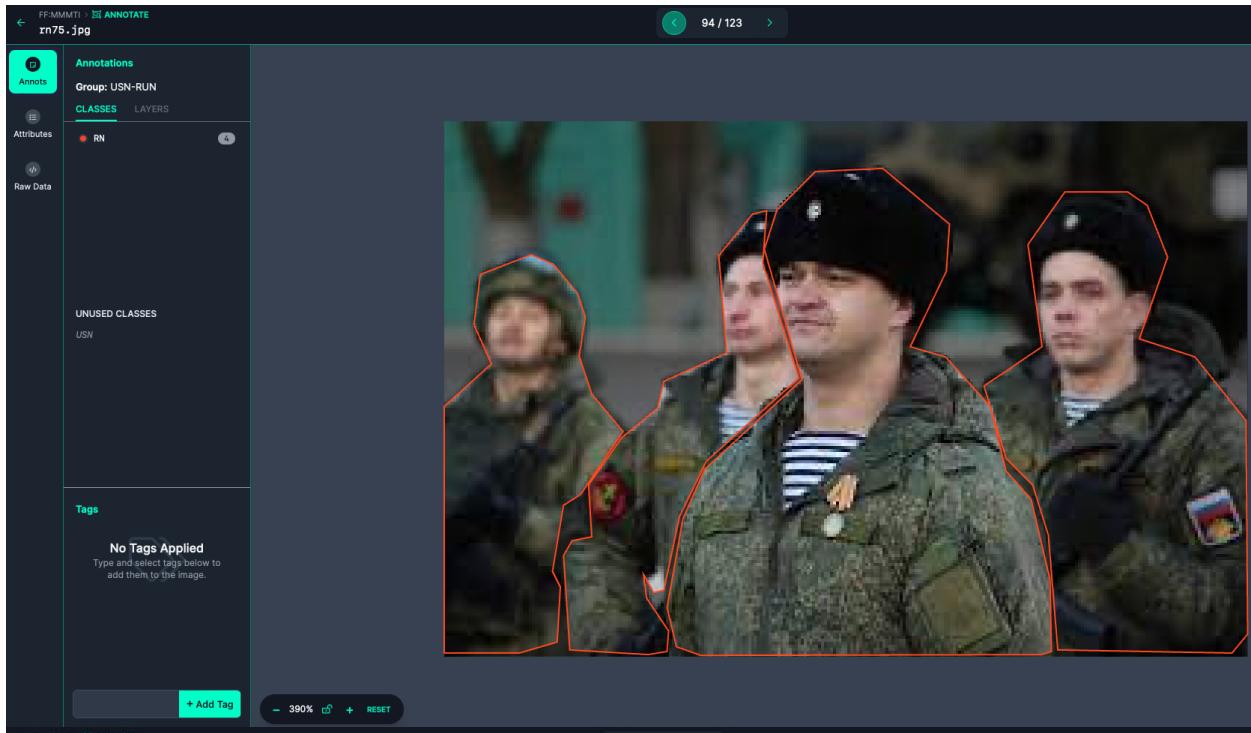

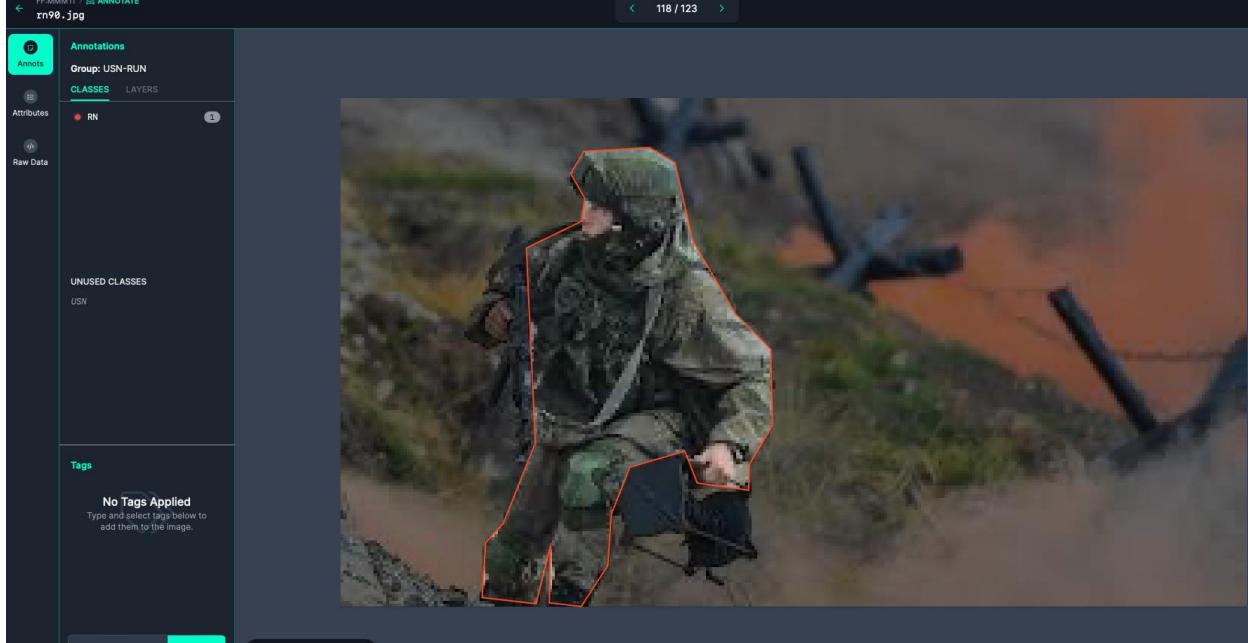

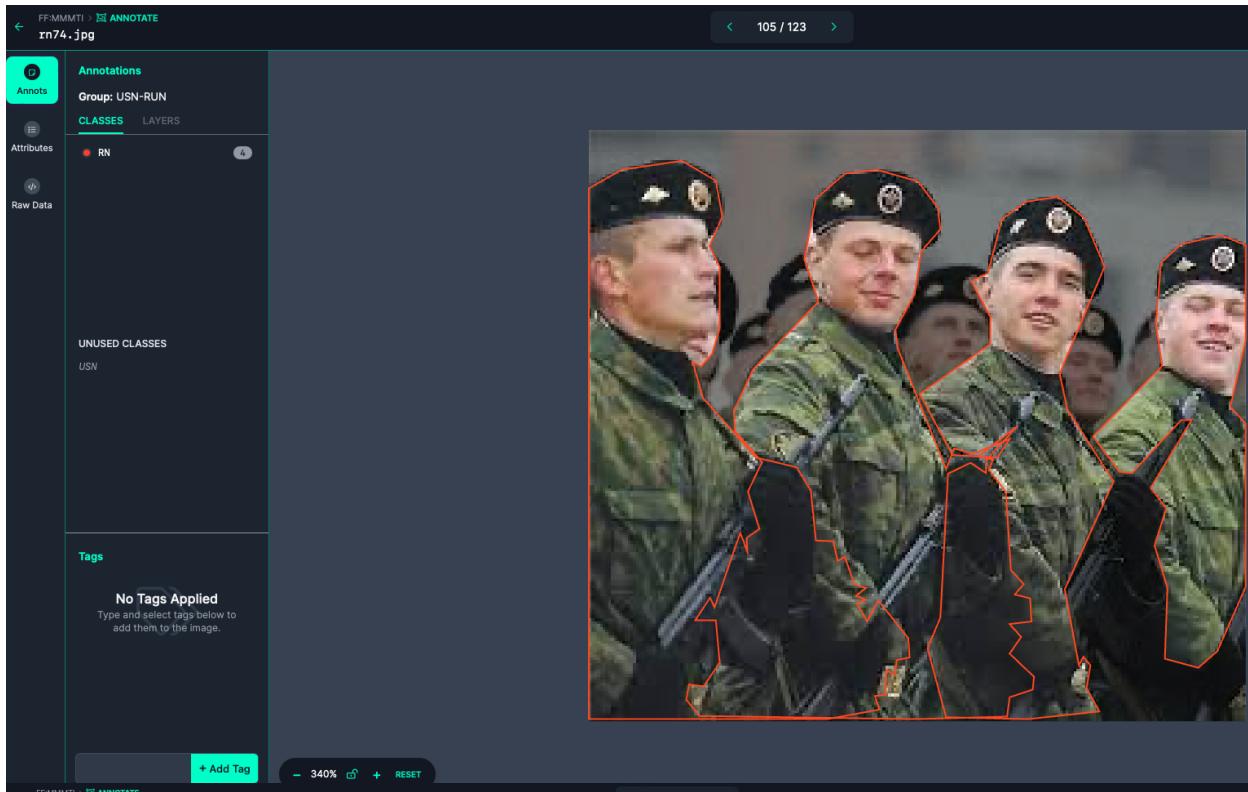

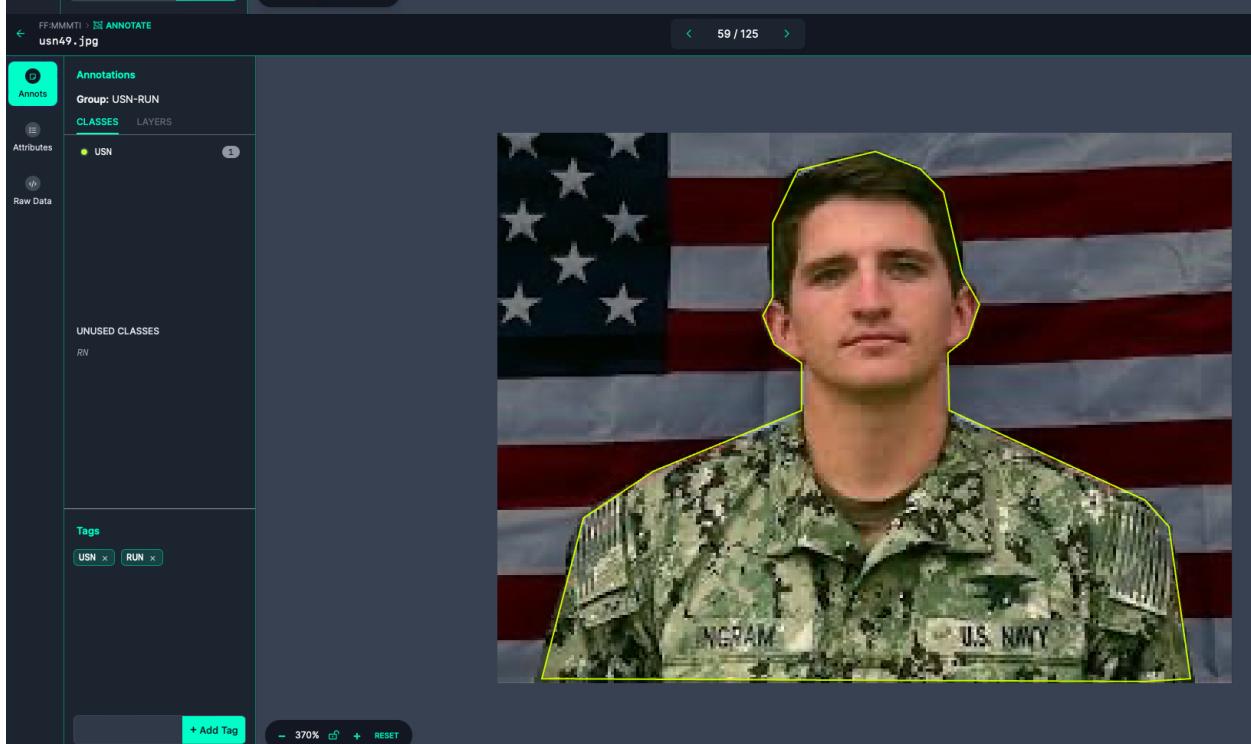

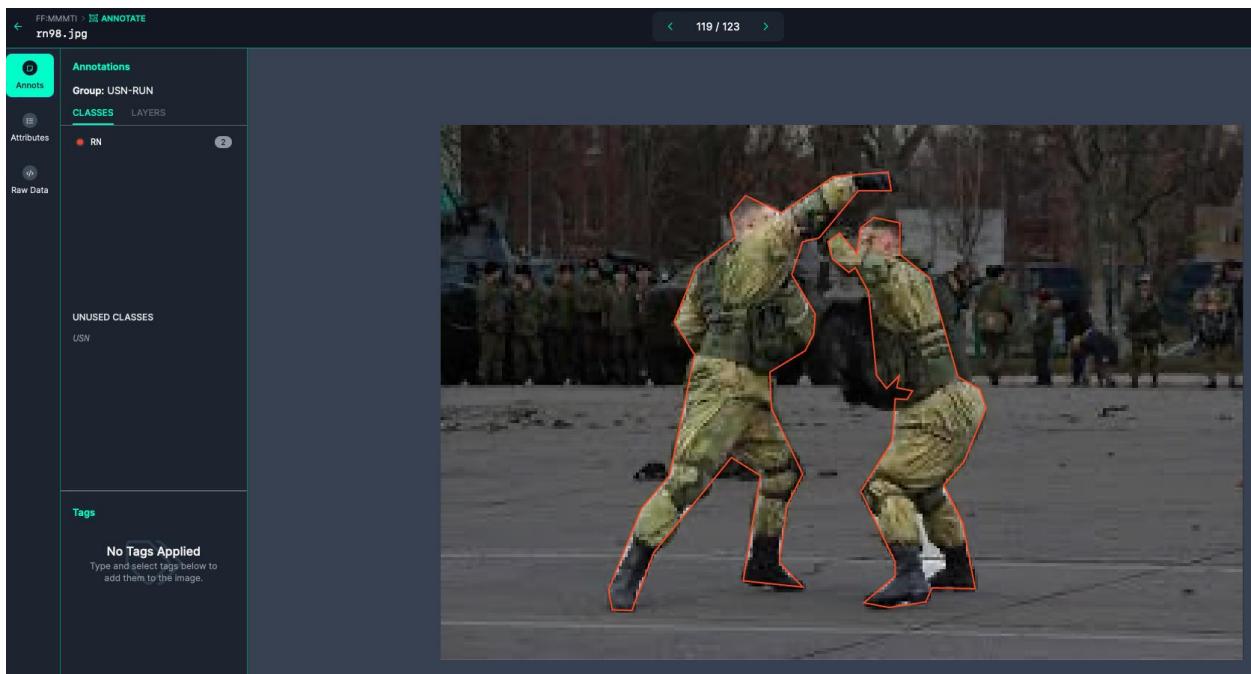

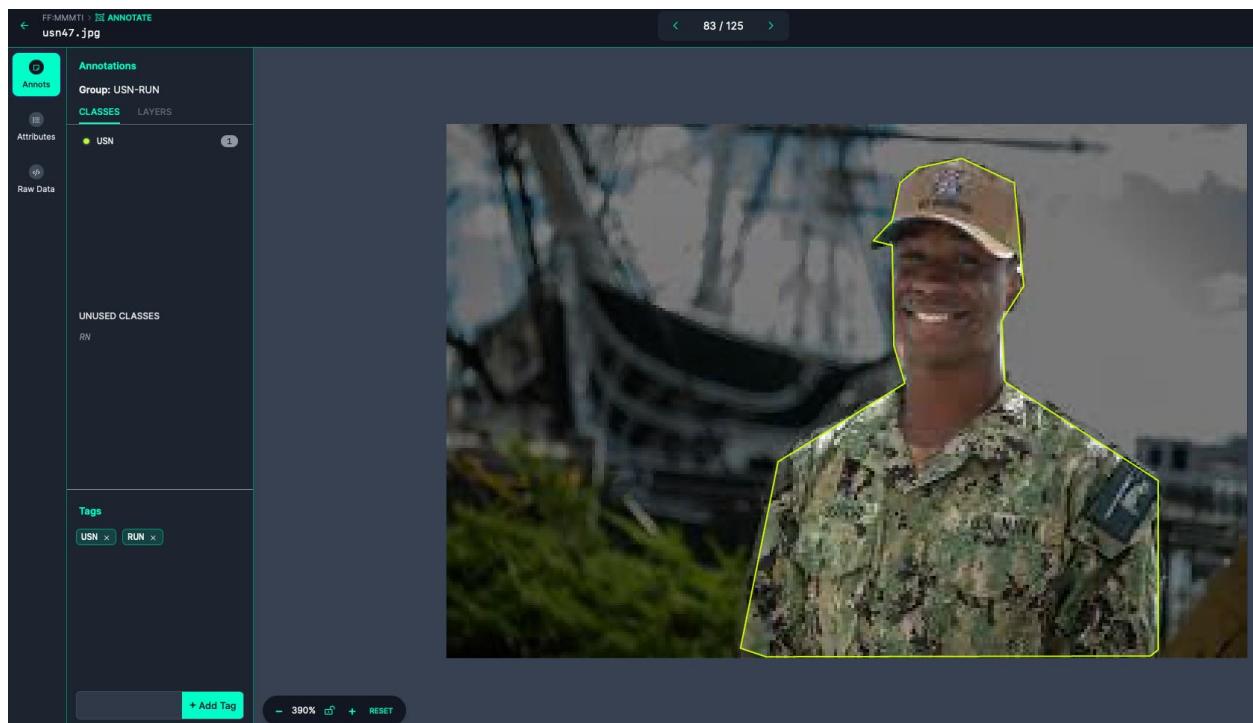

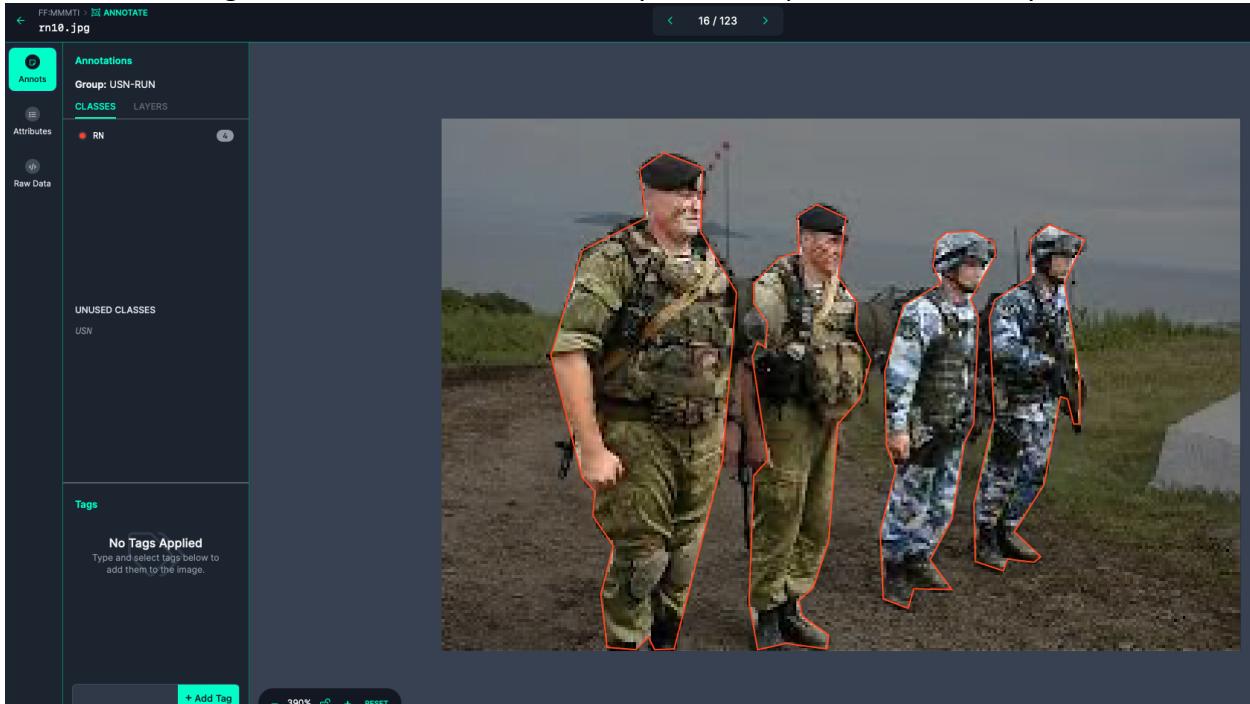

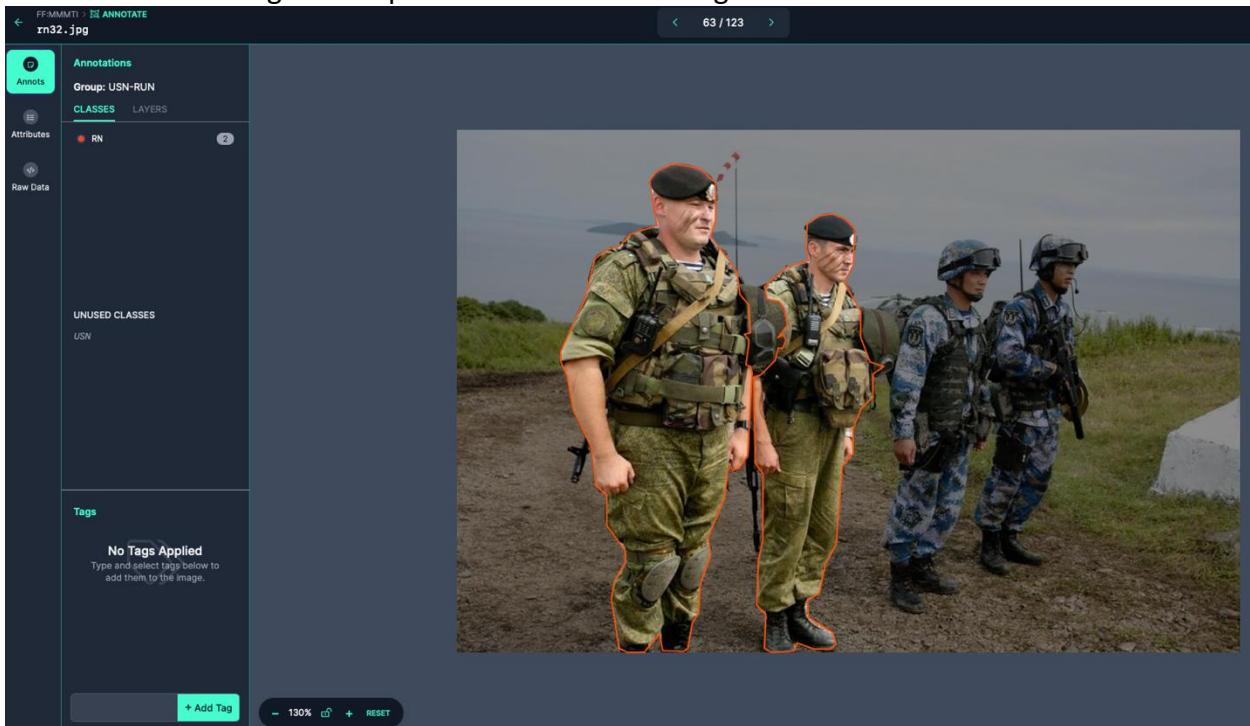

Incorrect annotation

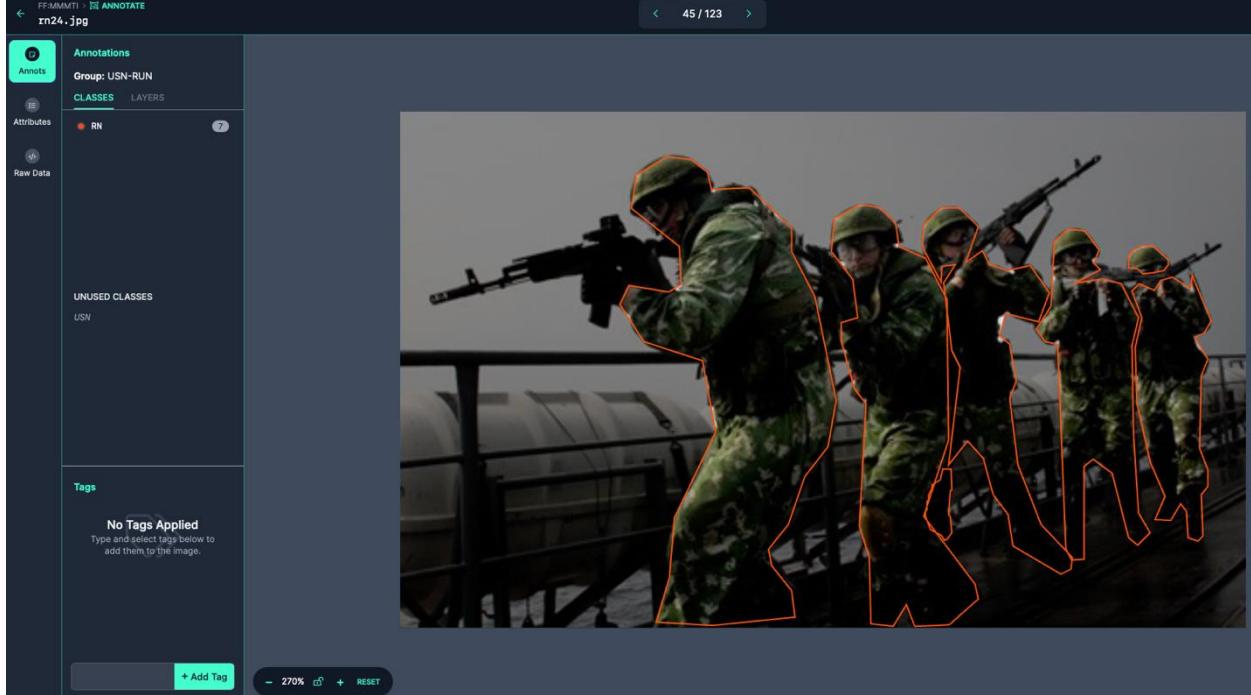

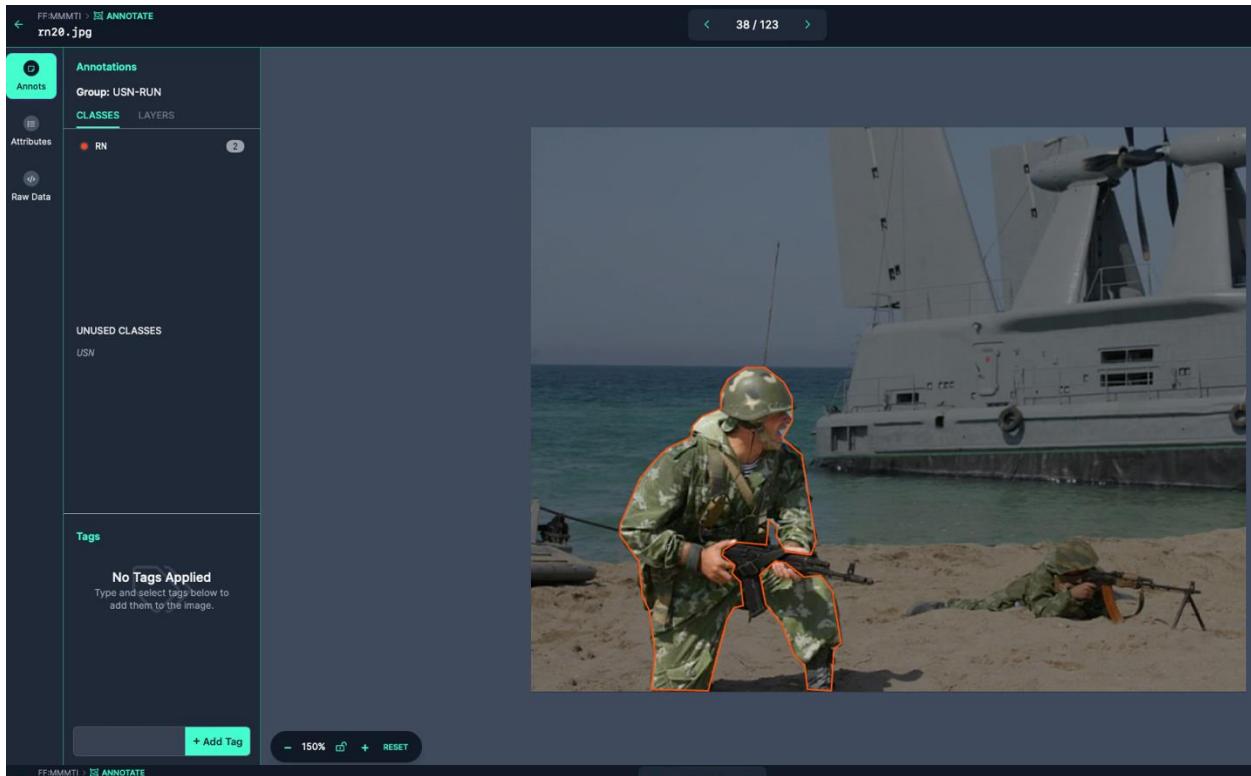

Soldiers on the right are from the Chinese military. Also, the picture is too blurry.

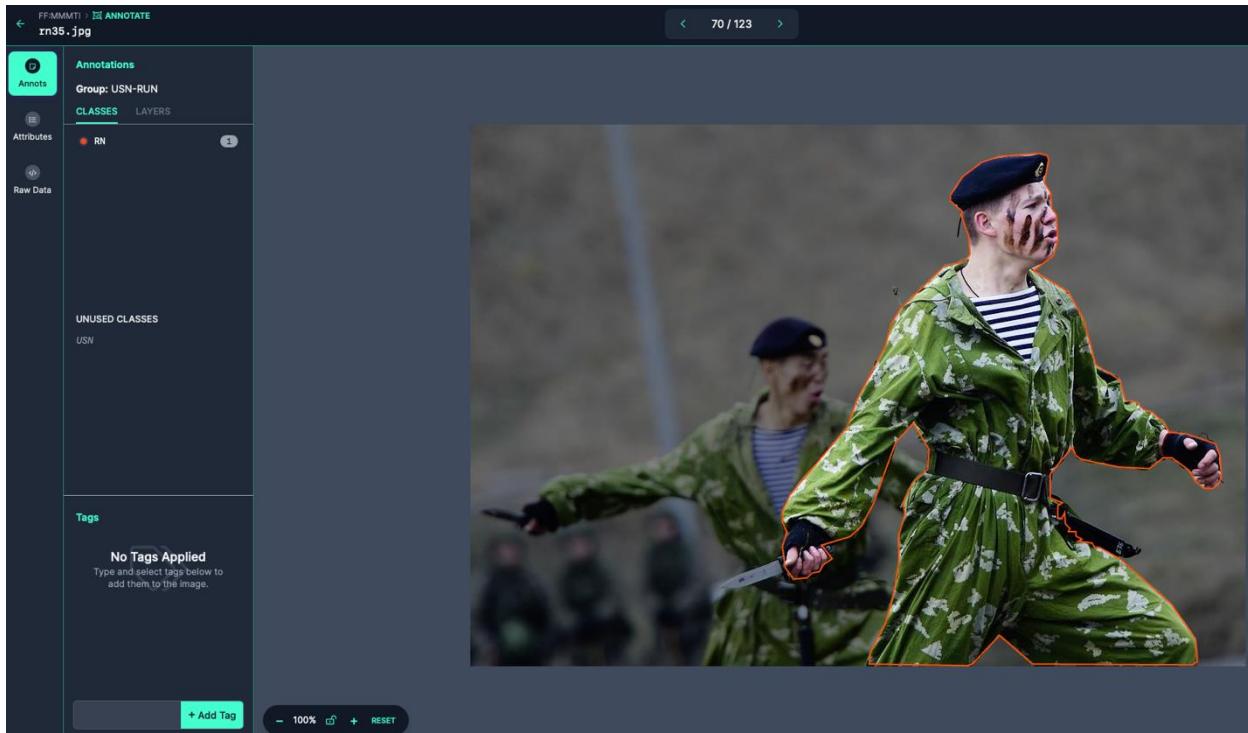

Just saw that you have it annotated correctly here and it's not blurry. That's great, please remove the first image and replace it with another image.

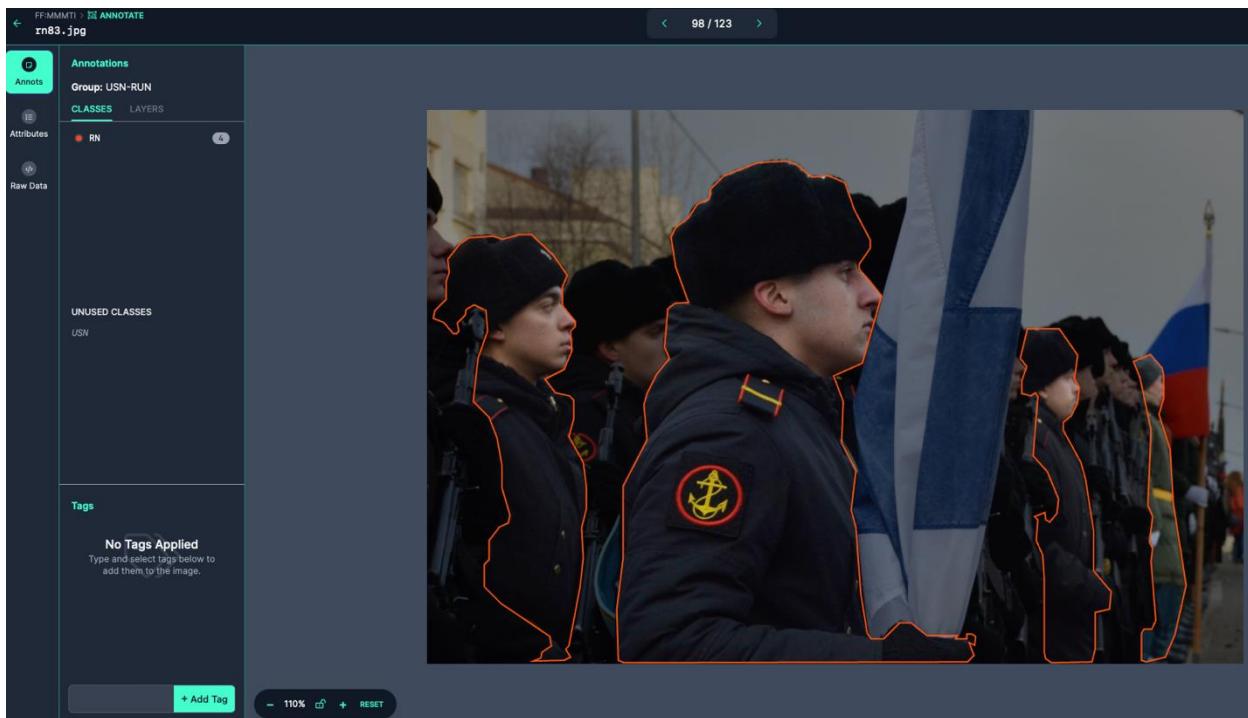

This seems like a different uniform altogether. Do keep it because it might be special forces or something but I wanted to note this.

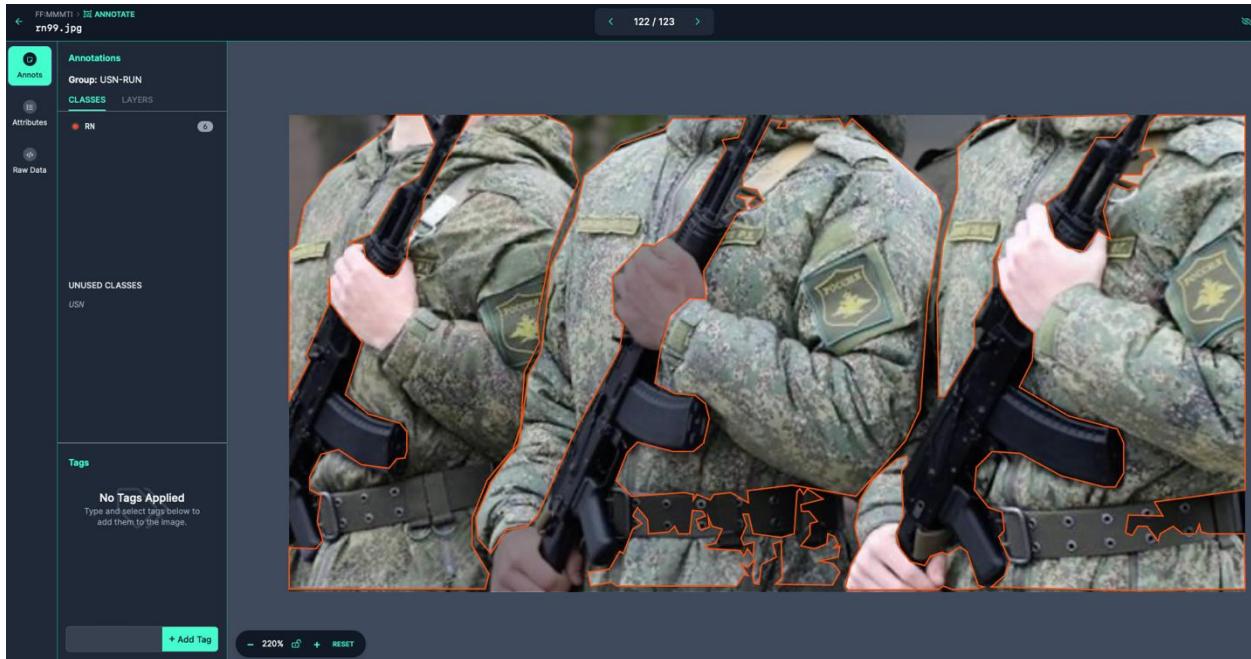

This looks like dress blues for Russian Navy. If that is indeed the case, then this is out of scope or can be considered a Null image.

The uniform belts are still part of the uniform. Please revise annotation

The face of the soldier and the patch on the shoulder should be included in one annotation.
